Post-Intubation Care

- Secure ETT
- Orogastic or nasogastric tube
- Portable chest radiograph
- Opioid then sedative boluses/drips
- Head of bed to 30-45 degrees, higher if very obese
- In-line suction
- Adjust ETT cuff pressure
- In-line heat-moisture exchanger
- Blood gas within 30 minutes post-intubation
- Foley catheter

Watch for post-intubation complications

Verify that airway equipment is ready for the next patient
