emupdates.com/anaphylaxis

Non-allergic/bradykinin mediated angioedema

h/t: @ibookcc

ACE inhibitor or ARB related
Hereditary angioedema/C1 esterase deficiency
tPA related

Empiric treatment: **1 g TXA over 10 minutes and 2 units FFP** ←

C1 inhibitor concentrate is first line treatment for hereditary angioedema
May be used in other forms of bradykinin mediated angioedema
Very expensive and often not immediately available
Berinert 20 u/kg, Ruconest 50 u/kg, Cinryze 1000 u

Bradykinin/kallikrein modifiers (ecallantide, icatibant, lanadelumab) poorly supported by evidence
